# ERIC DANY'S STOCK PROSPECTOR

MAIN STREET RESEARCH

Buy shares of Norstra Energy (NORX) Now Before  
the USGS releases new estimates and you could...

## Turn \$10,000 into \$833,000!

*This could be the biggest Bakken discovery ever!*

**Dear Investor:**

My name is Eric Dany. I am the editor and publisher of *Eric Dany's Stock Prospector Main Street Research*. My forte is being early to dig up the next big winner in the natural resources sector, and I'm saying now that my latest discovery, still little-known Norstra Energy (NORX) could well prove to be my most profitable-ever find!

You'll find the entire, intriguing story of Norstra and how it could be about to add as much as 8.5 billion barrels of oil to the Bakken Shale's already incredible resources.

But first, by way of credibility, I'd like to toot my own horn just a bit. Using my Main Street Research, instead of Wall Street's, some of my readers could have racked up some absolutely spectacular profits from recent past picks, including:

- **Suncor Energy** up 178% — profits at 360% and 500%.
- **Holly Frontier** — profits of 135%
- **Darling Int'l** — up 320%
- **Marathon Petroleum** — profits at 88% & 117%
- **Nova Gold** — profits at 100% & 135%

My annual *Winning Stocks Report* features eight companies for the year-ahead and over the last nine years our picks have trounced the market averages by more than two-to-one. Our Winning Stocks have returned an average of 18.8% annually versus 7.3% for the broad market.

I checked the numbers three times to make sure they were right. And it's true...

*Clients who bought the stocks recommended in our Annual *Winning Stock Special Reports* have trounced the market since 2004.*

Even as the market hits new all-time highs, there's lots of money still sitting on the sidelines, poised to pour into the market and it is likely you will see great stocks explode in bursts — racking up 80% of their next 12 month gains... in 12 weeks or less.

Now I'm predicting that NORX could be my best call ever! If you move on Norstra Energy Corp right now, you could pocket profits like you've never made from any stock buy to date! If you act before one of the majors makes a takeover move, this 60-cent stock could make you a fortune as...

*I believe that down the road, the company's estimated 8.5 billion barrels of oil in place could easily fetch \$25 a share in a takeover!*

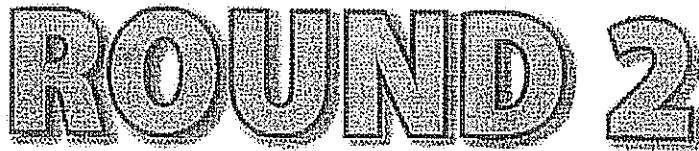

That works out to a gain of 5,000%! It means, if I'm right, \$10,000 invested in NORX now, while you can still get it for around 60-cents, could explode in value to a cool half a million!

Don't wait! An expected-soon report on the Bakken could boost oil resources in the Bakken by an estimated 458%, igniting a new round of Bakken-mania that could send NORX flying to \$5 a share, enough to turn \$10,000 into \$833,000!

Don't wait until after the Report is public and the stock has already quadrupled, get the details now and then call your broker or log on and invest in NORX!

— ERIC DANY

Soon-To-Be-Released, Game-Changing USGS Report Could Signal...

*Did you miss these huge round 1 Bakken Shale profits?*

<ul style="list-style-type: none"> <li>➤ 473% gain—Marathon Oil</li> <li>➤ 538% gain—Continental Resources</li> <li>➤ 560% gain—Statoil ASA</li> </ul>	<ul style="list-style-type: none"> <li>➤ 766% gain—Whiting Petroleum</li> <li>➤ 672% gain—Hess</li> <li>➤ 1,6115% gain—EOG Resources</li> </ul>
<ul style="list-style-type: none"> <li>➤ 5,557% gain—Kodiak Oil &amp; Gas</li> </ul>	

With a 99.6% probability of drilling success and an estimated 8.5 billion barrels of original oil in place, Norstra Energy's overlooked and underpriced play in Montana's Sun River Bakken could make you rich!

New, soon-to-be-released USGS Bakken Shale estimates of as much as 100 billion barrels of original oil in place, could make the U.S. energy independent.

Buy shares of Norstra Energy (NORX) now before the new estimates from the U.S. Geological Survey and you could...

Turn \$10,000 into \$833,000 as Norstra drills wells on its overlooked and underpriced Bakken Resource!

Seismic data indicate Norstra Energy (NORX) could be sitting on top of as much as...

**8.5 billion barrels of oil!!**

Dear Investor:

Never again need a U.S. President bow to a Saudi King!

Thanks to the vast oil resources in America's Bakken Shale, OPEC's stranglehold is about to come to a startling and abrupt end.

Mukesh Ambani, the billionaire chairman of Reliance Industries Ltd., whose company operates the largest oil refining complex in the world, said on a CNN interview with Fareed Zakaria that...

... the U.S.'s development of shale oil (the Bakken) and gas will make the country energy

independent as early as 2018."

Even the "peak oil" gloom-and-doomers and the environmental crowd agree: America is on track to become totally energy self-sufficient in the not-so-distant future.

ABC News recently reported that the U.S. Government Accountability Office estimates that if only half the oil bound up in U.S. rock could be recovered, it would be... "equal to the entire world's proven oil reserves."

ABC news also reported that "the GAO and

## Norstra ENERGY

private industry estimate the amount (shale oil) to be 3 trillion barrels."

How much oil is 3 trillion barrels?

Well, as Oil man Roger Day, Vice president of American Shale Oil puts it:

In the past 100 years — in all of human history — we have consumed a trillion barrels of oil."

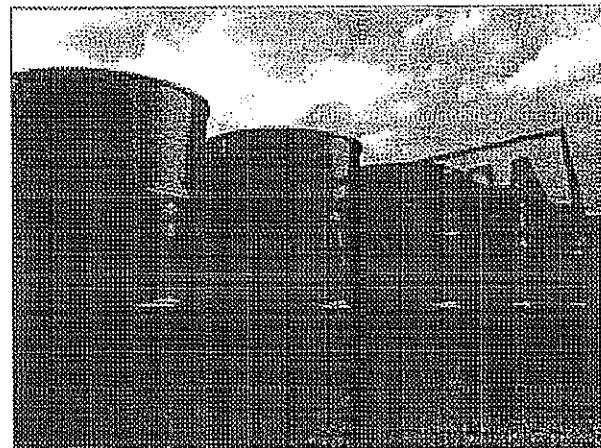

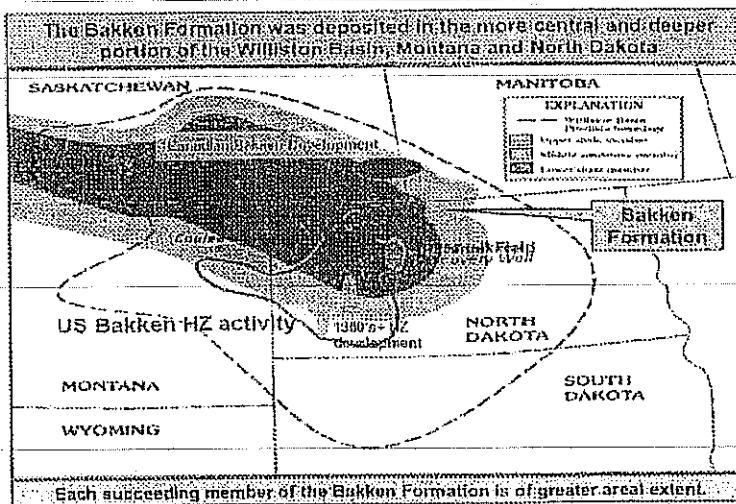

### Leading the charge:

And one of the major movers behind this dramatic turnaround is the seasoned geologist who heads Norstra Energy (NORX), and his 30 years of local experience. Norstra is a mostly-unknown exploration company that seismic data indicates could be sitting on as much as 8.5 billion barrels of oil!

### Buy NORX now, before the coming USGS Report takes this 60-cent stock to \$5! Act now and you could turn \$10,000 into \$833,000!

It's common knowledge among oil industry higher-ups that the U.S. Geological Survey (USGS) is putting the final touches on its brand new, two-year, intensive geological study to determine more-accurately how much recoverable oil is in the vast Bakken Shale.

Incredible technological advances in horizontal drilling and fracking have totally changed the equation and the USGS is about to reclassify billions of previously hard-to-recover oil as recoverable reserves.

And, although the USGS has not yet confirmed it, geologists at major, big-oil companies are betting that, when released, the new estimates will indicate there may be as much as 458% more recoverable oil there than previously reported by the USGS in its last 2008 survey!

**You need to act now before the government releases new, much higher estimates!**

Just as its previous 2008 survey unleashed an investor rush that quadrupled the trading prices of many Bakken-related oil stocks, so I believe could a 458% increase ignite a second round of Bakken buying.

Round-one investors, who were quick to jump on most any of the Bakken's exploratory drillers, could have made huge profits of 473%...766%...1,611% and even 5,557% as companies, like Marathon, Hess and Kodiak began drilling.

That was then. And the many of the initial Bakken investors are very, very rich.

But now, new estimates by credible geologists with some of the majors put the Bakken's total oil in place much higher, conceivably as much as 100 billion of what's referred to as original oil in place, or 24 billion barrels of recoverable oil (458% greater than the USGS's 2008 estimate).

It's expected that the new USGS Survey will confirm this astonishing

increase in recoverable Bakken oil reserves. And, I don't see how it can possibly not ignite a repeat of the round one buying frenzy.

*I've got a brand new Bakken play that, to me, looks exactly like Kodiak Oil & Gas before that last USGS Report sent Kodiak soaring by a stunning 5,557%!*

For the maximum bang for your buck, when that updated, USGS Report hits the street, there's a still-little-known player that I think is perfectly poised to repeat the incredible surge generated by the STGS's 2008 Report.

### Like Investing In Little-Known Kodiak Before It Began Its 5,557% Tear!

If you're an energy investor, you may know that most of those early, first-to-the Bakken, super-hot energy stocks have understandably cooled as fat and happy early investors have taken \$-billions in profits off the table.

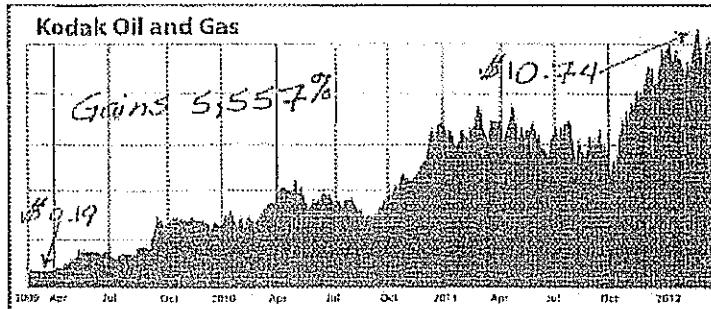

While many of those already-profitable, Bakken-related stocks will undoubtedly get a huge boost from a new USGS Report, none is likely to give you a repeat of the kind of explosive profits seen in the early days of the Bakken Shale revolution.

### An overlooked corner of the game-changing Bakken that could turn \$10,000 invested now into \$833,000!

Here's why I believe NORX could be the Bakken's next super-stock and why I'm urging you now to buy shares of NORX while you can still get them around 60-cents:

■ NORX represents a "whole new" Bakken within the already developing oil fields of the vast Bakken shale that is just now attracting attention.

■ NORX is a brand new, still undiscovered exploration company, headed by a field geologist recognized as one of America's most-experienced Bakken experts!

■ NORX just negotiated the mineral rights to 10,097 of prime Bakken acreage and somehow managed to pay less than 4% of what some of the majors have paid per acre.

■ Best of all, you can still invest in NORX around than 60-cents a share. Investing in NORX now could be like turning back the calendar to the days when penny stocks of Bakken Jr.'s, like Kodiak Oil & Gas, were about to explode in value by as much as 5,557%!

### Norstra Energy Inc. (NORX) Could Be the Next 5,557% Winner!

Read on and you will discover the fascinating story of round 2 of the Bakken revolution...

■ How this newly-launched explorer was able to snap up 10,097 acres of prime Bakken real estate at just \$1,500 an acre when the majors have been paying as much as \$40,000, plus...

■ Why geologists are saying NORX has a 99% certainty its new wells will be productive and profitable...

■ And why management is so certain it can complete a productive well at a cost of only about \$6 million compared to the \$200 million some of the majors have spent at other locations.

NORSTRA ENERGY

**It's an astonishing fact that  
99% of all wells drilled to  
date in the Bakken have  
been successful!**

Sophisticated seismic data indicate this  
Southern River Bakken Prospect  
should be no different!

Invest now in Norstra Energy (NORX)  
before the USGS Report unleashes a new  
stampede to buy Bakken drillers and this  
60-cent stock soars to \$5 on its way to \$25!

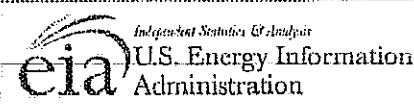

The Bakken Shale truly is a game-changer. It has the potential for America to replace Saudi Arabia as having the world's largest oil reserve!

The Bakken is a leviathan and continuous accumulation of oil-rich marine shale that lies beneath

**The Bakken has turned the  
energy world upside down!**

The United States is on track to produce more domestic crude oil than it imports from overseas sources by the end of the year, according to the U.S. Energy Information Administration's (EIA) March 2013 energy report. When it happens it will be the first time since February 1995 that domestic crude production has outstripped imports.

According to the report, increased shale oil production in Texas and North Dakota gets the credit for this shift, with some estimates suggesting that domestic sources will be out-producing imports by as much as two million barrels per day by the end of next year. What's more, monthly U.S. crude production could reach eight billion barrels per day in 2014, highs not seen since 1988.

Alberta Basin Bakken  
Saskatchewan  
Saskatchewan  
MONTANA

200,000 square miles of North Dakota and northwest Montana.

The Bakken is deposited in a shallow marine environment and consists of rich organic oil-generating shales (Upper and Lower Members) that surround a layer of silt and/or sand known as the Sappington (Middle Member). The porous, silty Middle Member acts as a reservoir and serves as conduit for the oil produced by horizontal drilling and multi-stage fracking.

Geologists have known about the Bakken since the 1950s, but it wasn't until the 90s, when Halliburton came up with its revolutionary technology for horizontal drilling and fracking, that all that oil became recoverable at a profit.

Five years ago, as the result of breakthrough advancements in horizontal drilling and fracking, the U.S. Geological Survey (USGS) issued a stunning report estimating the recoverable oil in the Bakken Shale formation was 25 times greater than it had originally reported in 1955.

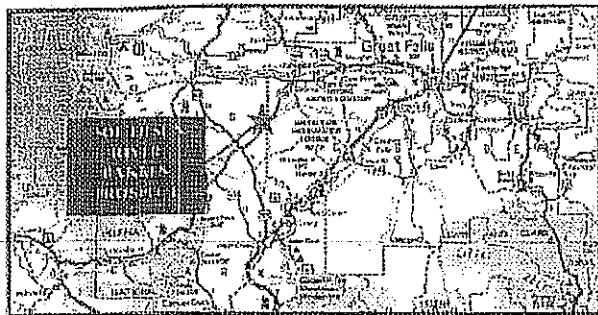

According to its official 2008 survey, the USGS estimated that Bakken oil resources could have up to 4.3 billion barrels of recoverable oil compared to its 1955 estimate of just 151 million barrels. It was a true game-changer. It meant that suddenly the U.S. had a potential supply of oil four times as large as that held in Saudi Arabia's massive Ghawar region.

The increased estimate triggered an investor stampede (round 1) to buy stocks in the companies that were best positioned to cash in on the Bakken.

It was like shooting fish in a barrel. During

round 1 of the Bakken rush, investors who got in early cleaned up with profits of:

- 473% gain on Marathon Oil
- 538% gain on Continental Resources
- 560% gain on Statoil ASA
- 766% gain on Whiting Petroleum
- 672% gain on Hess
- 1,611% gain on EOG Resources
- 5,557% gain on Kodiak Oil & Gas

Now the agency is putting the final touches on a brand new, two-year study of the Bakken which many industry geologists believe will increase the 2008 estimates of recoverable oil five-fold.

As then Secretary of the Interior Ken Salazar said back in 2010, when he initiated the new USGS survey, "With ever-advancing production technologies, this could mean more oil could potentially be recovered in the formation,"

Now, I'm talking about a brand-new Bakken player, headed-up by a seasoned, proven-successful geologist who's got enough skin in this game to assure me this is going to be a breathtaking success.

I'm talking about Norstra Energy Corp. (NORX) and Glen Landry, the 30-year veteran geologist who I suspect has way more hands-on, field-related experience than any president of any of the majors!

### Here's the geology that makes Norstra Energy a screaming buy:

Norstra Energy (NORX) has a farm-out

## The Bakken has turned the energy world upside down!

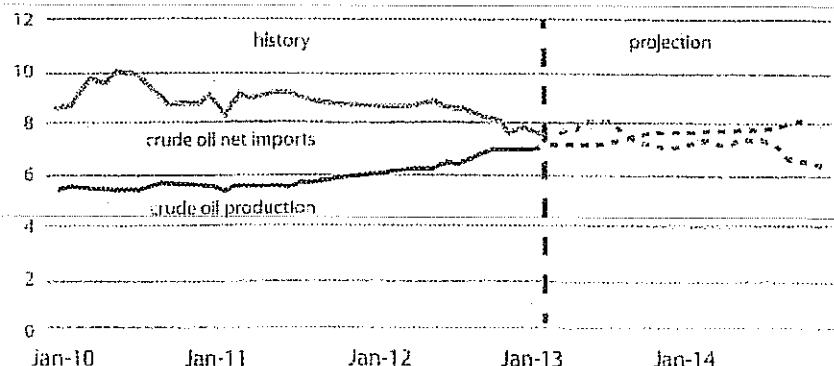

The United States is on track to produce more domestic crude oil than it imports from overseas sources by the end of the year, according to the U.S. Energy Information Administration's (EIA

March 2013 energy report). When it happens it will be the first time since February 1995 that domestic crude production has outstripped imports.

According to the report, increased shale oil production in Texas and North

Dakota gets the credit for this shift, with some estimates suggesting that domestic sources will be out-producing imports by as much as two million barrels per day by the end of next year. What's more, monthly U.S. crude production could reach eight billion barrels per day in 2014, highs not seen since 1988.

## NORSTRA ENERGY

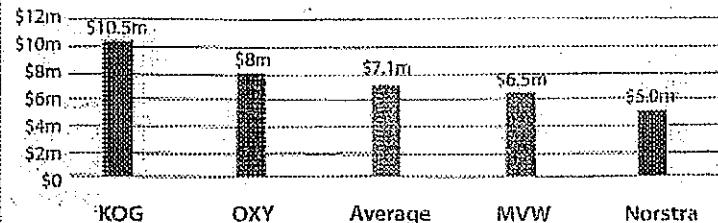

agreement with Summit West Oil, L.L.C. for the South Sun River Bakken Prospect which consists of 10,097 acres of prime Bakken acreage with almost 10 years left on most of the leases.

The company's South Sun River Bakken Prospect is what geologists call an over-pressured Bakken shale resource play in Lewis & Clark County, Montana, in the developed Bakken Fairway that extends southwards from Alberta, Canada into northwest Montana.

### Norstra practically stole the acreage!

While the Bakken-hungry majors have paid as much as \$40,000 for an acre of prime leases, Norstra Energy has been able to snap up these 10,097 acres at a mind-boggling, bargain cost of just \$1,500 per acre. They pulled it off thanks to geologist and NORX president, Glen Landry who dug deep into existing seismic records and used his 30 years of field experience and first-hand knowledge of the south Bakken Fairway to identify an overlooked prospect with exactly the ideal geological profile.

#### Projected Well Costs vs. Competitors

#### Success is a 99.6% certainty!

The Williston Basin and the New Alberta Fairway are two principal areas of Bakken activity. The success rate of Bakken oil wells drilled is 99.6%.

Historical seismic, exploration and drilling records, some of which Mr. Landry was personally involved in, have been reviewed by the company. The historical work was focused exclusively on deeper oil formations as the Bakken was not a commercially accessible oil formation at the time due to horizontal drilling and fracking technologies not being available.

The technological revolution in the oil service

### Newer Technology: Lower Costs, More Efficiency for Norstra Energy

With an excellent location in the Alberta Fairway, Norstra Energy is planning to spud its first well in the Alberta Fairway with a 10-12 stage frac with a proposed budget of \$5,000,000. After review of the seismic lines, the first drill location is planned to be approximately around 1 mile away from the Shell Krone well, making drilling easier and costs lower. A typical new well today in the Williston Basin costs \$7,100,000 to produce on average, and requires a depth of 8000' or more to reach the Bakken. Near the Shell Krone well, the first drill location will hit Bakken at only 8000-8,500'.

Year	Number of Frack	Cost with Fracking	Recoverable Oil	Barrels Oil/Day	Cost per Barrel
2006	1	\$3,500,000	1,27,000	100-200	\$14.45
2007	7	\$4,000,000	236,000	1,000	\$21.19
2008	12	\$4,400,000	411,000	1,500	\$13.38
2009	20	\$6,100,000	700,000	3,000+	\$15.25
2010	28-32	\$6,300,000	1,000,000	5,000+	\$11.15
2011	40	\$7,100,000	2,150,000	7,019	\$3.00

NORSTRA ENERGY

industry has changed this. The sizable data provided through this existing historical logging and seismic work that covered the Bakken potential is now proving invaluable and during the last five years,

**With a buyout, \$10,000 invested now while you can still get NORX at around 60-cents, could explode to as much as \$833,000! \$5M per well cost is less than half that of others!**

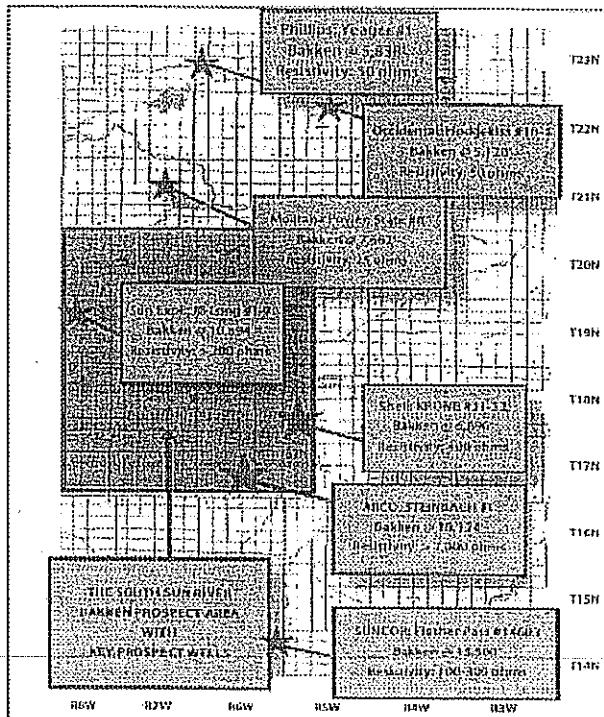

With an excellent location in the Alberta Fairway, Norstra Energy will produce its first well in Alberta Fairway with over 40 fracks for only \$5 million, less than half that of Kodiak Energy's per-well cost.

Though the Williston Basin is the more established of the two prolific Bakken areas, the New Bakken Fairway is expanding rapidly in northwest Montana.

The cost of entry is significantly more expensive in the Williston Basin with lease acreage selling in excess of \$8,000/acre. Drilling costs in the Williston Basin are also extremely high as wells are deeper than 11,000', and cost between \$2-5 million. Operating costs are also higher because of lack of refineries, pipeline infrastructure, long trucking distances to refineries, due to lack of skilled manpower and housing shortages.

The New Alberta Fairway in northwestern Montana, where Norstra's 10,097 acre prospect is located, is similar to the Bakken in the Williston Basin, but offers several major advantages.

It's cheaper to develop in comparison to

surrounding areas. Lease acquisition cost is more moderate than the \$8,000/acre in the Williston Basin and drilling cost is 1/3 of the Williston Basin because the Montana Bakken occurs at a shallower depth, between 4,000'-10,000' compared to 11,000'.

The Bakken Fairway is also adjacent to the Rocky Mountain Thrust Belt which helps create the perfect thermal environment for maximum oil production. The respected Canadian analyst, Wood Mackenzie, estimates that the New Alberta Fairway has at least an additional 37 billion BO in-place, between 12.5-15.3 million barrels of oil per square mile, and refineries are nearby.

**Norstra Energy's 10,097 acres could hold as much a 8.5 billion barrels of original oil in place.**

Initial production from a recently drilled Bakken well has exceeded 7,000 BOPD (barrels of oil per day), and production of 5,000 BOPD is not unusual in Bakken using horizontal drilling and fracking techniques.

*continued...*

Warren Buffett recently invested 26.5 billion to get in on the Bakken. Billionaire Bill Ackerman, founder of Pershing Square hedge fund, made a multi-billion-dollar Bakken investment of his own. Billion-dollar hedge funds like Citadel Investment Group and Moore Global Investments are upping their exposure to the Bakken as well.

CONFIDENTIAL TREATMENT REQUESTED

FSM0009123

SECLIT-000092736

## Norstra ENERGY

Currently, there is intense leasing activity in the area as many major companies are rapidly acquiring lease positions. Majors like Newfield Energy, Anschutz, Rosetta Resources and at least a dozen other companies have been extremely active in the area.

- Newfield Exploration Company obtained 10,500 BOPD in November 2012 from 100,000 acres in North Dakota.
- ExxonMobil (XOM) owns 600,000 acres in North Dakota and Montana, which produced 33,000 BOPD in 2012.
- On November 3rd, 2011, a new production record was set for a Bakken well when Whiting Petroleum posted an IP of 7,009 BO in a 24 hour period.
- Other operators in the Bakken include Hess (HES) and Marathon Oil (MRO) which would be likely candidates to add to their acreage position as drilling in Montana commences.

The Bakken Fairway is adjacent to the Rocky Mountain Thrust Belt, which creates a thermal environment for maximum oil production. 37 billion barrels of oil are estimated in the Bakken Fairway.

Potential oil production is estimated throughout the literature and publications at 10-15 MMBO per square mile in areas where the Bakken is thermally mature and where the critical middle Sappington

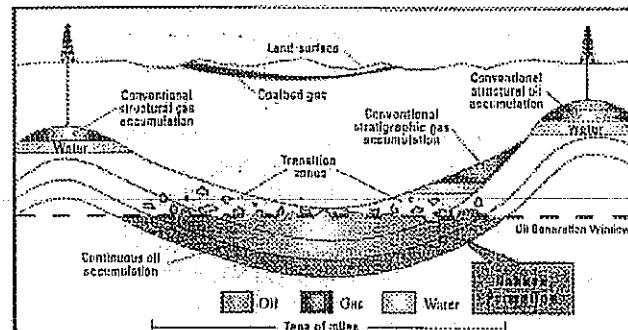

Member is between 20'-30' thick.

## Seismic Data Confirm, An Overlooked, but Oil-Rich Corner of the Bakken!

The Bakken Formation can be over 100' thick, and has 3 members. The Upper and Lower Members are the oil rich shale, and the Middle Member is a sand/silt section typically between 10-30' thick.

The Middle Member is known as the "Sappington" New horizontal drilling techniques combined with high pressure "fracking" are responsible for the massive oil production now being seen in the Bakken. Estimates for oil recovery in the Bakken are between 12.5-15.3 million BO per square mile.

Bakken hydraulic fracturing oil wells have an expected productive life of 35-40 years, and it's expected the drilling phase of the Bakken will last until 2030, and production will last until 2070.

NOTICE ENERGY

## Here's why \$10,000 invested in NORX now could grow to \$833,000!

Geological estimates for the area of Norstra's 10,097 acres are for 13,000,000 barrels of original oil in place for each 640-acres, four-well drilling site.

When you do the numbers, using net revenue interest of just 80%...

At a reasonable 30% recovery rate, that yields 3,900,000 barrels per 640 acres site...

Four wells per 640 acre site @ \$5M each = \$20 million. Figuring oil selling at \$90 a barrel and operating expenses per four-well site of \$2,500 and a well life of 10 years...

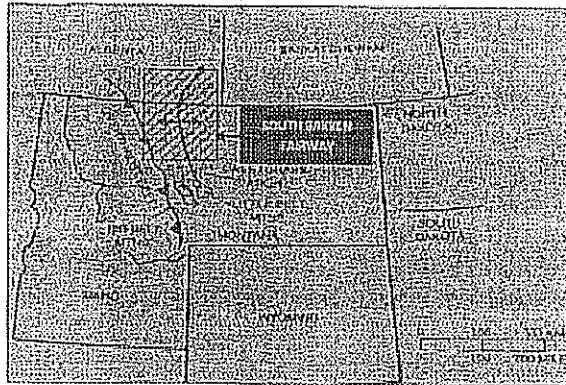

So, that works out to \$280,000,000 net revenue less expenses of \$20,300,000 = profit of 259,700,000 for an investment of just \$20,300,000.

Or, extrapolating...an investment of just \$10,000 would yield \$137,931.

That's why near-term, I expect this stock, NORX, to jump quickly from its current ridiculous 60-cents a share to the \$5.00 range and then in the next 18-24 months, to begin a steady climb that will eventually take it to about \$25 or more a share!

### Smack in the middle of the Bakken's newly recognized sweet spot!

The South Sun River Bakken Prospect opportunity is located in a prime area of the Alberta Bakken Fairway

where the western edge of the Bakken Fairway plunges into contact with the tectonically heated Thrust Zone and the resulting thermal maturity of the Bakken offers the highest potential for oil production.

Peak oil generation is reached near or within the footwall of the overthrust belt where Ro is closer to 1.0% and migration into Mississippian traps occurred over a 40-50 m lateral distance.

Specifically, the Norstra Energy prospect lies within the key oil producing zone where thermal maturity (Ro) is between 0.7% and 1.5%. Oil production begins when Ro is above 0.65% and slows when Ro is over 1.3%.

The Total Oil Content (T.O.C.) readings in the prospect area are high as well, reading between

## Norstra ENERGY

7% and 14%, and water content of the Bakken in the area is low.

There are excellent resistivity readings in the Upper and Lower Bakken members in key wells in the prospect area. The wells show excellent sections of the Bakken with resistivity readings over 400 ohms, well in excess of the minimum 35 ohms needed for possible oil production. The Middle Member of the Bakken, known as the Sappington Silt, is also well developed, with adequate porosity (3-15%) and permeability (1-20 md) for oil production.

Below, for comparison, are several wells in Norstra's prospect area and their Bakken section thickness and corresponding resistivity readings:

Sec.22 T17N-R6W	ARCO/Steinbach #1	Bakken: 76' Ohms: >2,000
Sec.32 T18N-R5W	Shell/Krone 31-32	Bakken: 70' Ohms: 400
Sec.3-T14N-R6W	Suncor/Flusher 14603	Bakken: 52' Ohms: 100-300
Sec.9-T19N-R8W	Sun Exploration/JB Long #1-9	Ohms: >200

### Round 2 of astonishing Bakken profits will benefit from technological advances that have slashed the cost per barrel by more than 67%!

The Bakken is what geologists call an over-pressurized system. The high pressure in the Bakken means the oil is contained within the source rock itself. This means the oil remains in place and is tightly contained throughout the geologic structure.

The technology gets more and more cost effective:

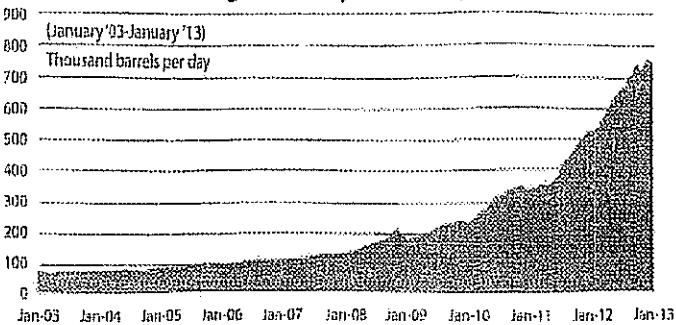

The formation's high pressure — coupled with advances in technology — make each well drilled in the Bakken capable of producing 600,000 and 700,000 barrels of oil over the course of its life.

Bakken production took off in 2008 and was producing around 150,000 barrels per day.

As you read this, North Dakota is pumping 768,000 barrels per day and has over 3,000 wells working.

Thanks to advances in horizontal drilling and fracking, oil production has increased 412% in just four years. If that's not a boom, I don't know what is.

### North Dakota average monthly crude oil production

### The Bakken Is The Future and Norstra (NORX) Is Now Your Best Bakken Opportunity:

Despite all the wrangling coming out of Washington, there can be no doubt that over the coming years, the U.S. will become energy independent.

In fact, within the next 8 years, I believe the good old US of A will become the world's number one oil producing country.

Inside of 10 years, we could too be 100% energy independent, without the help of alternate or synthetic fuels!

According to the U.S. Energy Information Administration, (EIA) and thanks mostly to the Bakken, U.S. crude oil production is expected to rise by 815,000 barrels per day in 2013.

That's the largest increase in annual output since the US started producing crude oil commercially in 1859, and it would bring this year's total output to 7.25 million barrels per day.

Back in September, 2012, oil production from the Williston Basin topped 800,000 barrels per day for the first time (granted, 90% of that oil came from North Dakota's portion of the Bakken Formation, but it's a record nonetheless).

So, mark my words: The Bakken is happening. And it's happening in spite of Obama's policies — not because of them.

What's really shocking, however, is that most investors are totally clueless about this jaw-dropping change that's at our doorstep.

It's not something you're likely to read too much about in many of the mainstream news sources. In fact, a lot of the stories, commentary, and technological breakthroughs responsible for thrusting America onto the global energy landscape have largely gone unnoticed. Which is yet another reason I'm so keen on NORX.

As Norstra's president, Glen Landry said in a recent press release:

*"This is a fantastic opportunity for Norstra and its shareholders. I believe that this area of Montana could become the next Williston basin in time and we're well positioned to be a player in the area".*

*"My 30 years of experience in this region have convinced me that northwest Montana holds a significant amount of oil and I am looking forward to leading Norstra and its shareholders towards profitability through exploration and production."*

Mr. Landry is a seasoned, third generation geologist from the University of Montana. His grandfather was involved in the development of the famous Kevin Sunburst Oil Field in Montana, and the family has been active in the oil industry ever since.

Mr. Landry received a geology degree from the University of Montana over 30 years ago, and his main

### The Majors Are Already In The Bakken

In late December, 2011, there are over 200 drilling rigs operating in the Williston Basin and the New Alberta Fairway, and 8 drilling permits per day being issued on average. In the last quarter of 2010, there was an estimated \$3 Billion invested in Bakken drilling, leasing and production facilities. The principal companies involved are listed below:

Marathon Oil	Northern Oil & Gas
Exxon Mobil	Brigham Exploration
Occidental Petroleum	Continental Resources
Hess	Denbury Resources
EOG Resources	Kodiak Oil & Gas
Petrobakken	Enbridge Energy
Whiting Petroleum	Kinder Morgan
Oasis Petroleum	MDU Resources
Newfield Energy	QEP Resources
Primary Petroleum	Samson Oil & Gas

exploration and development focus has been Montana and North Dakota.

During the 1980's, he consulted for Occidental Petroleum, which, amongst other oil companies, was very active in exploring and shooting seismic throughout northwestern Montana. These efforts were focused on finding crude oil in deep formations, but were not economically feasible at the time, but now represent a viable source of untraditional oil through fracking and other modern extraction techniques.

### Eight Strong Reasons to Load Up on NORX Now While You Can Still Get It at Around 60-cents a Share:

- LOCATION** – The position of the Prospect in the regional maturity of the Bakken is excellent.
- COSTS** – Acquisition costs were a fraction of what some majors have paid for similar prospects and development costs will also be less due to the shallower wells and the availability of existing infrastructure
- DATA** – Nearby resistivity or confirmed presence of oil is excellent. The Shell Krone well and the ARCO Steinbach confirm this.
- THE RIGHT KIND OF PROJECT** – The Bakken is a sealed resource project, considering high resistivity in the nearby Krone and Steinbach wells. A flushed reservoir is commonly less than 35 ohms of resistivity on the logs.
- 99.6% CHANCE OF SUCCESS** – with the initial well is excellent. With review of the seismic line the company will locate the first drill location on the same block that has the Krone well. State mapping has already done this. All blocks are likely commercial.
- A DONE DEAL** – superb lease position of 10,097.99 mineral acres.
- ADJACENT PROJECTS** – Oil in Place (OOIP) of 13 MMBO per 640 acres.
- LEADERSHIP** – Glen Landry, President and CEO has 30 years of field experience in the area and CFO Dallas Kerkenezov has the business and financial experience needed to guarantee success.

## Norstra ENERGY

Under Mr. Landry's leadership, the company is in the process of evaluating additional lands in northwestern Montana with an aim toward acquiring a sizeable land position for exploration in the Bakken formation.

As I said before, my name is Eric Dany and I'm hoping I have convinced you to accept a no-risk trial to my investment letter, *Eric Dany's Stock Prospector*.

### Are you ready to open the door when opportunity comes knocking?

A subscription to the Stock Prospector can help you reach your financial goals and if you take advantage of this special offer today, you will receive our Successful Investor Kit, which includes our current Special Reports and information on getting started with the Stock Prospector's strategy.

As a subscriber you'll also receive free additional bonus reports when they are issued. These reports are issued from time-to-time during the year when under-valued opportunities are uncovered.

Our current special reports *Now and Later—Two Growth and Opportunity Buys and Two Tempting Natural Resource Stocks*. The market is embracing dividend paying stocks and in our Now and Later report you'll learn about two dividend paying stocks with a lot of growth potential. Natural Resources are currently out of favor in the market, but these two picks could do well in virtually any market. You'll receive these reports FREE with your subscription.

### Don't pass up this chance to buy in early on the company that could be sitting on 8.5 Billion Barrels of Oil!

I encourage you to invest now in Norstra Energy. And I also hope you'll want to accept a no-risk trial subscription to my monthly newsletter, *Eric Dany's Stock Prospector* to keep up with my next great finds.

A subscription to the Stock Prospector could

## 6 Convincing Reasons to Load Up on NORX Now While You Can Still Get It at Around 60-cents a Share:

- 1. **THE BAKKEN** – is the vast shale oil deposit that's recently become recoverable, due to recent breakthrough technologies in horizontal drilling and fracking.
- 2. **LOCATION** – Norstra Energy has 10,097 acres under lease in the center of a newly exploited but little developed corner of the Bakken. Nearby reservoirs of confirmed presence of oil are excellent. The Shell 1010 well and the ARCO Terrellbach confirm the quality of the Bakken.
- 3. **8.5 BILLION BARRELS POSSIBLE** – Adjacent projects indicate as much as 13 million barrels of original oil in place for every 640 acre well.
- 4. **SUCCESS RATE** – 99% of all new wells drilled in the Bakken are profitable.
- 5. **LOW COSTS** – Acquisition costs were a fraction of what some majors have paid for similar prospects. Development costs will also be less due to the shallower wells and the availability of existing infrastructure.
- 6. **LEADERSHIP** – Norstra's President and CEO has 30 years of field experience in the area and the company CEO has the business and financial experience needed to guarantee success.

Buy shares of NORX now while you can still get them around 60-cents and you could turn \$10,000 into \$833,000 in the not too distant future!
